

## GCSE DT Internal Exam Information

### List of content covered in the assessments

#### **GCSE DT – CORE CONTENT- ALL STUDENTS**

#### Textbook – Edexcel GCSE (9-1) Design and Technology

Topic Title	Topic Content
<b>1.1 The impact of new and emerging technologies</b>  Textbook pages 3 - 10	<ul style="list-style-type: none"><li>• <b>Industry</b> – unemployment, workforce skill set, demographic movement, science and technology parks.</li><li>• <b>Enterprise</b> – privately owned businesses, crowd funding, government funding and not-for-profit.</li><li>• <b>Sustainability</b> – sustainable, transportation costs, pollution, demand on natural resources and waste generated (reducing, reusing, recycling and recovering).</li><li>• <b>People</b> – workforce, consumers, children, people with disabilities, wage levels, highly skills workforce, automation and apprenticeships.</li><li>• <b>Culture</b> – culture, population movement within the EU and social segregation.</li><li>• <b>Society</b> – changes in working hours and shift patterns, Internet of Things (IoT), remote working and video conference meetings.</li><li>• <b>Environment</b> – pollution, waste disposal, materials separation, transportation of good around the world and packaging of goods.</li><li>• <b>Production techniques and systems</b> – standardised design and components, Just-in-time (JIY), lean manufacturing, batch production, continuous production, one-off production and mass production.</li></ul>
<b>1.2 Evaluating new and emerging technologies to inform design decisions</b>  Textbook pages 11 – 14	<ul style="list-style-type: none"><li>• <b>Critical evaluation</b> – manufacturing capabilities, budget constraints, the materials used, timescale, who the product is for, 3D printing a lower jaw and portable power source for mobile hardware.</li><li>• <b>Consideration of contemporary and potential future scenarios</b> – natural disasters, medical advances, travel, global warming and communication.</li><li>• <b>Ethical perspectives on new and emerging technologies</b> – ethically.</li><li>• <b>Environmental perspectives on new and emerging technologies</b> – use of materials, carbon footprint, manufacture and transportation: energy usage and consumption and life-cycle analysis.</li></ul>
<b>1.3 Energy: generation, storage and choosing appropriate sources</b>  Textbook pages 15 – 18	<ul style="list-style-type: none"><li>• <b>Sources, generation and storage of energy</b> – coal, oil, gas, biomass, biodiesel, tidal, wind, solar, hydroelectric, storage energy and power systems.</li><li>• <b>Choosing appropriate energy sources for products and power systems</b> – portability of the power source, environmental impact, power output, circuit/system connections and cost.</li></ul>

<p><b>1.4 Smart and composite materials, and technical textiles</b></p> <p>Textbook pages 19 – 24</p>	<ul style="list-style-type: none"> <li>• <b>Modern and smart materials</b> – shape-memory alloys (SMAs), nanomaterials, photochromic glass, reactive glass, piezoelectric materials, temperature-responsive polymers, e.g. poly N-isopropylacrylamide (PNIPAM) and conductive links.</li> <li>• <b>Composites</b> – concrete, plywood, fibre/carbon/glass, reinforced polymers and robotic materials.</li> <li>• <b>Technical textiles</b> – agrotexiles, construction textiles, geotextiles, domestic textiles, environmentally friendly textiles, protective textiles and sports textiles.</li> </ul>
<p><b>1.5 Mechanical devices used to produce movement</b></p> <p>Textbook pages 25 – 32</p>	<ul style="list-style-type: none"> <li>• <b>Types of movement</b> – oscillation, linear, rotary and reciprocation.</li> <li>• <b>Classification of levers</b> – levers (effort, fulcrum and load), mechanical advantage, velocity ratio, efficiency, linkages, bell crank, reverse motion linkage, cams, followers, pulleys and belts, v-belt, input and output speeds, cranks and slides, gear types, simple gear trains, compound gear trains, idler gear, revolutions per minute calculations, bevel gears, rack and pinion.</li> </ul>
<p><b>1.6 Electronic systems</b></p> <p>Textbook pages 33 - 35</p>	<ul style="list-style-type: none"> <li>• <b>Sensors</b> - light-dependent resistor and thermistor.</li> <li>• <b>Control devices and components</b> – single-throw switch, resistors and transistor.</li> <li>• <b>Outputs</b> – buzzer and light-emitting diodes.</li> </ul>
<p><b>1.7 Programmable components</b></p> <p>Textbook pages 35 – 37</p>	<ul style="list-style-type: none"> <li>• <b>How to use flow charts.</b></li> <li>• <b>Inputs and decisions: switching outputs on or off.</b></li> <li>• <b>How to process and respond to analogue inputs</b> – analogue.</li> <li>• <b>How to use simple routines to control outputs</b> - time delay, count and feedback loop.</li> </ul>
<p><b>1.8 Categorisation of ferrous and non-ferrous metals</b></p> <p>Textbook pages 37 – 39</p>	<ul style="list-style-type: none"> <li>• <b>Ferrous metals</b> – mild steel, stainless steel and cast iron.</li> <li>• <b>Non-ferrous metals</b> – aluminium, copper and brass.</li> <li>• <b>Properties</b> – ductility, malleability and hardness.</li> </ul>
<p><b>1.9 Papers and boards</b></p> <p>Textbook pages 40 – 42</p>	<ul style="list-style-type: none"> <li>• <b>Board</b> – folding boxboard, corrugated board and solid white board.</li> <li>• <b>Properties</b> – flexibility, printability and biodegradability.</li> </ul>
<p><b>1.10 Thermoforming and thermosetting polymers</b></p> <p>Textbook pages 43 – 46</p>	<ul style="list-style-type: none"> <li>• <b>Thermoforming polymers</b> – acrylic (PMMA: polymethyl methacrylate), high-impact polystyrene (HIPS) and biopol.</li> <li>• <b>Thermosetting polymers</b> – polyester resin ad urea formaldehyde.</li> <li>• <b>Properties of polymer</b> – insulator of heat, insulator of electricity and toughness.</li> </ul>
<p><b>1.11 The categorisation of fibres, and textiles</b></p>	<ul style="list-style-type: none"> <li>• <b>Natural fibres</b> – animal wool and plant cotton.</li> <li>• <b>Synthetic fibres</b> – polyester and acrylic.</li> </ul>

<p><b>Textbook pages 47 – 51</b></p>	<ul style="list-style-type: none"> <li>• <b>Woven textiles</b> – plain weave – calico and twill weave – denim.</li> <li>• <b>Non-woven textiles</b> – felted wool fabric and bonded fibres/webs.</li> <li>• <b>Knitted textiles</b> – warp-knitted fabric and weft-knitted fabric.</li> <li>• <b>Properties</b> – elasticity, resilience and durability.</li> </ul>
<p><b>1.12 Natural and manufactured timbers</b></p> <p><b>Textbook pages 52 – 54</b></p>	<ul style="list-style-type: none"> <li>• <b>Natural timbers: hardwoods</b> – oak, mahogany, beech and balsa.</li> <li>• <b>Natural timbers: softwood</b> – pine and cedar.</li> <li>• <b>Manufacture timbers</b> – plywood and medium density fibreboard (MDF).</li> <li>• <b>Properties</b> – hardness, toughness and durability.</li> </ul>
<p><b>1.13 All design and technological practice takes place within contexts which inform outcomes</b></p> <p><b>Textbook pages 55 – 58</b></p>	<ul style="list-style-type: none"> <li>• <b>Using material, components and processes to inform outcomes</b> – mechanical properties (strength, elasticity, plasticity, malleability, ductility, hardness, toughness, brittleness, durability, stability and stiffness). Physical properties (density, electrical conductivity, thermal conductivity, size, corrosion, aesthetics, optical, joining and magnetism).</li> <li>• <b>Advantages and disadvantages of materials, components and manufacturing processes</b> - elements that are analysed.</li> <li>• <b>Justifying materials, components and manufacturing processes</b> – prototypes.</li> </ul>
<p><b>1.14 Challenges that influence the processes of design and making</b></p> <p><b>Textbook pages 58 – 61</b></p>	<ul style="list-style-type: none"> <li>• <b>Respect for different social, ethnic and economic groups.</b></li> <li>• <b>Environmental, social and economic issues relating to the design and manufacture of products</b> – The Fairtrade Foundation, carbon offsetting schemes, product disassembly and disposal of waste.</li> <li>• <b>Consideration of ‘green designs’</b> – promoting green designs, recycling and reusing materials and products.</li> <li>• <b>Human capability.</b></li> <li>• <b>Cost of materials.</b></li> <li>• <b>Manufacturing capability.</b></li> <li>• <b>Environmental impact</b> – life-cycle analysis.</li> </ul>
<p><b>1.15 Investigate and analyse the work of professionals and companies to inform design</b></p> <p><b>Textbook pages 62 – 65</b></p>	<ul style="list-style-type: none"> <li>• <b>Analysing a product to specification criteria</b> – form, function, user requirements, performance requirements, materials and components/systems, scale of production and cost, sustainability, aesthetics, marketability and consideration of innovation.</li> <li>• <b>The work of past and present designers and companies</b> – Alessi, Apple, Heatherwick Studio, Joe Casely-Hayford, Pixar, Raymond Loewy, Tesla, Inc. and Zaha Hadid.</li> </ul>
<p><b>1.16 Use of different design strategies</b></p>	<ul style="list-style-type: none"> <li>• <b>Collaboration</b> – substitute, combine, adapt, modify, put, eliminate and reverse.</li> <li>• <b>User-centred design</b> – anthropometric data.</li> </ul>

Textbook pages 66 – 68	<ul style="list-style-type: none"> <li>• <b>Systems thinking,</b></li> </ul>
<b>1.17 Using communication techniques to present design ideas</b>  Textbook pages 68 – 77	<ul style="list-style-type: none"> <li>• <b>Freehand sketching</b> – different mediums, grid paper or templates and the use of arrows.</li> <li>• <b>Digital photography/media.</b></li> <li>• <b>Cut and paste techniques.</b></li> <li>• <b>3D models</b> – traditional materials, small plastic building bricks, system modelling and computer modelling.</li> <li>• <b>3D drawing.</b></li> <li>• <b>Oblique and isometric projections.</b></li> <li>• <b>Perspective drawing</b> – one-point perspective and two-point perspective.</li> <li>• <b>Orthographic and exploded views.</b></li> <li>• <b>Assembly drawings.</b></li> <li>• <b>Systems and schematic diagrams.</b></li> <li>• <b>Computer-aided design and specialist drawing programs</b> – CAD freehand sketching, 2D modelling, 3D modelling and system design.</li> <li>• <b>Record and justify design ideas clearly</b> – annotated sketches.</li> </ul>

### GCSE DT - METAL STUDENTS ONLY

Topic Title	Topic Content
<b>2.1 Design Contexts</b>  Textbook page 87	<ul style="list-style-type: none"> <li>• <b>Design contexts</b></li> </ul>
<b>2.2 Metals sources, properties, social and ecological footprints</b>  Textbook pages 87 - 90	<ul style="list-style-type: none"> <li>• <b>Ferrous metals</b> – high carbon steel and tungsten steel.</li> <li>• <b>Non-ferrous metals</b> – tin, 7000 series aluminium alloys and titanium.</li> <li>• <b>Sources and origins</b> – iron, steel, aluminium, copper and tin.</li> <li>• <b>The physical characteristic of ferrous and non-ferrous metals</b> – conductivity, magnetism and density.</li> <li>• <b>Working properties of ferrous and non-ferrous metals</b> – durability, toughness, elasticity, strength, tensile and compressive.</li> <li>• <b>Social footprint</b> – trend forecasting, impact of extraction and material production on communities and wildlife, recycling and disposal, ecological footprint (sustainability, extraction and erosion of the landscape, processing, transportation, wastage and pollution).</li> </ul>

<p><b>2.3 The way in which the selection of metals is influenced</b></p> <p>Textbook pages 90 - 92</p>	<ul style="list-style-type: none"> <li>• <b>Factors that influence the selection of metals for a specific application</b> – aesthetic, environmental, availability, cost, social, cultural and ethical.</li> </ul>
<p><b>2.4 The impact of forces and stresses on metals and how they can be reinforced and stiffened</b></p> <p>Textbook pages 92 - 94</p>	<ul style="list-style-type: none"> <li>• <b>Forces and stresses</b> – compression, tension, shear, electrical and magnetic.</li> <li>• <b>Reinforcement/stiffening techniques</b> – hardening, tempering, the effect of carbon content and work hardening.</li> <li>• <b>I, U, T and C beams.</b></li> </ul>
<p><b>2.5 Stock forms, types and sizes to calculate and determine the quantity of metals required</b></p> <p>Textbook pages 95 - 97</p>	<ul style="list-style-type: none"> <li>• <b>Stock forms/types</b> – bar, sheet, plate, pipe/tube, castings, extrusions, wire and powder metallurgy.</li> <li>• <b>Sizes</b> – gauge, cross-sectional area, diameter and wall thickness of tubes.</li> </ul>
<p><b>2.6 alternative processes that can be used to manufacture metal products to different scales of production</b></p> <p>Textbook pages 98 - 107</p>	<ul style="list-style-type: none"> <li>• <b>Processes</b> – forging, casting (sand casting, die casting, powder metallurgy – sintering), stamping, extrusion, welding, hardening (tempering, work hardening and annealing) and case hardening.</li> <li>• <b>Scales of production</b> – one-off, batch, mass, continuous, techniques for high-volume production, marking-out methods (scriber, odd leg calipers, engineer’ square, centre punch, dividers, surface block and vee block.</li> <li>• <b>Ensuring quality when producing in quantity</b> – jigs, fixtures, templates, patterns, moulds, sub-assembly, computer-aided manufacture (CAM), quality control, working within tolerance and minimising waste.</li> </ul>
<p><b>2,7 Specialist techniques, tools, equipment and processes that can be used to shape, fabricate, construct and assemble a high-quality metal prototype</b></p> <p>Textbook pages 107 - 120</p>	<ul style="list-style-type: none"> <li>• <b>Tools and equipment</b> – hand tools, machinery and digital design and manufacture.</li> <li>• <b>Shaping</b> – filing, cutting, drilling, turning, milling, bending (beaten metalwork, sheet metalwork, tube bending).</li> <li>• <b>Abrading/grinding</b> – wet and dry paper, emery cloth and disc/angle grinder.</li> <li>• <b>Fabricating/constructing</b> – brazing, soldering (hard), punching, riveting: snap and pop, wastage and addition.</li> <li>• <b>Assembling</b> – tapping/threading, tapping and threading.</li> <li>• <b>Fastening</b> – nuts, bolts, washers and machine screws.</li> <li>• <b>Use of adhesives</b> – contact adhesive and epoxy resin.</li> </ul>

<p><b>2.8 Appropriate surface treatments and finishes that can be applied to metals for functional and aesthetic purposes</b></p> <p>Textbook pages 121 - 123</p>	<ul style="list-style-type: none"> <li>• <b>Surface finishes and treatments</b> – paint, dip coating, electroplating, anodising, galvanising, powder coating, lacquering and polishing.</li> </ul>
---	--

**GCSE DT - TIMBER STUDENTS ONLY**

Topic Title	Topic Content
<p><b>7.1 Design Contexts</b></p> <p>Textbook page 277</p>	<ul style="list-style-type: none"> <li>• <b>Design contexts.</b></li> </ul>
<p><b>7.2 Sources of timber</b></p> <p>Textbook pages 277 - 283</p>	<ul style="list-style-type: none"> <li>• <b>Natural timbers: hardwoods</b> – oak, mahogany, beech, balsa, jelutong, birch and ash.</li> <li>• <b>Natural timbers: softwoods</b> – larch.</li> <li>• <b>Manufactured timber</b> – plywood, MDF and chipboard.</li> <li>• <b>Sources and origins of timber.</b></li> <li>• <b>The physical characteristics of timber</b> – knots, colour, grain structure and density.</li> <li>• <b>Working properties</b> – elasticity, tensile strength and compressive strength.</li> <li>• <b>Social footprint</b> – trend forecasting, impact of logging on communities, recycling and disposal.</li> <li>• <b>Ecological footprint</b> – sustainability, deforestation, habitat destruction and loss, processing, transportation, wastage and pollution.</li> </ul>
<p><b>7.3 Selection of timber</b></p> <p>Textbook pages 283 - 287</p>	<ul style="list-style-type: none"> <li>• <b>Aesthetics factors</b> – form, colour and texture.</li> <li>• <b>Environmental factors</b> – sustainability, genetic engineering, seasoning and upcycling.</li> <li>• <b>Availability factors</b> – use of stock materials, use of specialist materials, hurricanes, storms and disease.</li> <li>• <b>Cost factors</b> – quality of material, manufacturing processes necessary and treatments.</li> <li>• <b>Social factors</b> – use for different social groups, trends, fashion and popularity.</li> <li>• <b>Cultural and ethical factors</b> – avoiding offence, suitability for intended market, the consumer society, the effects of mass production and built-in product obsolescence.</li> </ul>
<p><b>7.4 Strengthening timber</b></p>	<ul style="list-style-type: none"> <li>• <b>Forces and stresses</b> – compression, tension and shear.</li> <li>• <b>Natural forces within the timber as it grows.</b></li> </ul>

Textbook pages 288 - 289	<ul style="list-style-type: none"> <li>• <b>Pre-stressed construction beams.</b></li> <li>• <b>Reinforcement and stiffening techniques</b> – frame structures, fabrication, assembly and construction processes.</li> <li>• <b>Lamination.</b></li> <li>• <b>Braces and tie bars.</b></li> <li>• <b>Embedding composite materials.</b></li> </ul>
7.5 Stock forms and sizes Textbook pages 290 - 291	<ul style="list-style-type: none"> <li>• <b>Srock forms/types</b> – regular sections, mouldings, dowels and sheets.</li> <li>• <b>Sizes</b> – imperial and metric, PAR and PSE, cross-sectioned area, diameter and board sizes.</li> </ul>
7.6 Manufacturing processes Textbook pages 292 - 296	<ul style="list-style-type: none"> <li>• <b>Processes to cut and shape materials</b> – routing, sawing, use of mortiser and use of a bag press.</li> <li>• <b>Scales of production</b> – one-off, batch, mass production and continuous.</li> <li>• <b>Techniques for quantity production</b> – marking-out methods, jigs, fixtures, templates, patterns, sub-assembly, computer-aided manufacturing, quality control, working within tolerance and efficient cutting to minimise waste.</li> </ul>
7.7 Equipment and processes used to make prototypes Textbook pages 296 - 304	<ul style="list-style-type: none"> <li>• <b>Tools and equipment</b> – hand tools, machinery, digital design and manufacture.</li> <li>• <b>Shaping</b> – drilling (twist drill, flat bit, forstner bit, auger and hole saw).</li> <li>• <b>Cutting</b> – hand saw, tenon saw, coping saw, scroll saw and jigsaw.</li> <li>• <b>Planing.</b></li> <li>• <b>Chiselling.</b></li> <li>• <b>Turning.</b></li> <li>• <b>Abrading.</b></li> <li>• <b>Carving.</b></li> <li>• <b>Files, rasps and surforms.</b></li> <li>• <b>Fabricating and constructing</b> – lamination, veneering, use of screws, nailing (round wire nails, oval nails and panel pins), adhesives (PVA, contact adhesive) and wood joints (butt, dowel, lap, housing, mitre, dovetail, mortise and tenon).</li> <li>• <b>Wastage.</b></li> <li>• <b>Addition.</b></li> <li>• <b>Assembling</b> – knock-down fittings and ironmongery.</li> <li>• <b>Hinges</b> – butt, flush, butterfly and T hinge.</li> </ul>
7.8 Surface treatments and finishes for functional and aesthetic purposes	<ul style="list-style-type: none"> <li>• <b>Surface finishes and treatments</b> – painting, staining, varnishing, wax, oil, shellac and veneering.</li> </ul>

**Any resources which students can use to support this preparation for the assessments**

- Access to the ActiveLearn online course textbook.
- A subject reference guide – this provides students with information about the different areas of study.
- Workbooks that they will bring home prior to exams, which includes practice questions and video links.
- A subject knowledge organiser – a quick reference guide.
- DTtoolbox channel on YouTube is good (DT teacher's channel)
- Design and Technology on Demand channel (although AQA is covered the topics are the same as Pearson Edexcel)
- [https://wiki.dtonline.org/index.php/Main\\_Page](https://wiki.dtonline.org/index.php/Main_Page) is good if there is a specific term they want to look up.
